Our Stack

Generated with Supernova

Kotlin Shared Module

Background - Supernova

- Converts mobile designs into UI code for iOS, Android, Flutter and RN
- Allows you to optionally define animations, navigation, localizations
- Uses native SDK UI components, no custom frameworks

Background – Kotlin Multiplatform

- Set of tools for building Kotlin code for JVM, Native, JS, ...
- Provides additional “expect” and “actual” function syntax for platform-specific implementations
- Super experimental at this point, but fun to try for sure!

- Working with Kotlin Multiplatform be like...

It's demo time!
